

Tree shelter ConifProtect GP®

Mesh for conifers

ConifProtect® is a shelter with **diamond meshes** and large and very robust strands, ideal for protecting conifers against attacks by roe, deer and stags.

Its airy mesh allows easy growth of the plant without strangulation.

This shelter is **extremely easy to install** thanks to its high rigidity due to the significant weight per linear meter.

Technical data:

- Made of polyolefin providing the best compromise between rigidity and flexibility to avoid damaging the tree during its growth.
- Diamond mesh 20 x 20 mm
- Thickness of the strands : 2 mm
- Anti-Uv allowing a life exceeding 36 months

The professional protection for plantations

Diameter in cm	Weight in g / ml	Height in cm
30	300	90
30	300	120
30	300	180

Ideally, the tree shelter **ConifProtect GP®** should be installed with two acacia or chestnut stakes.
