

Biodegradable ground cover

100% Jute

This biodegradable ground cover is a thick, non-woven and needle-punched felt of 1000 g/m². This is the economical ground cover par excellence given its structure entirely composed of jute.

To increase the resistance of the felt, the jute fibres are needle punched onto a non-woven, photodegradable base of 10 to 13 g/m².

Service life: 18 months*

To protect each plant individually we are also able to offer you jute collars, available in the following dimensions (cm): 30x30 / 42x42 / 52x52 / 70x70 / 105x105

Advantages:

- Economical solution
- Blocks the proliferation of weeds
- Maintains good conditions for plant development (humidity, etc.)

** The service life is given as a guide, as this depends on the conditions of use and installation (humidity, temperature, ground cultivation before installation)*

Roll width in m	Roll length in linear meter	Thickness
1,05	25	6 to 7 mm
2,10	25	6 to 7 mm

It is recommended to install the ground cover and collars using bevelled metal staples.
